

Epstein, Jeremy

Jeremy Epstein has been involved in information security for over 20 years, and is an internationally recognized researcher in the area. He recently joined SRI International after working as Senior Director of Product Security at Software AG, where he was responsible for analyzing and improving the security of all products, designing security for new products, and complying with security standards. Prior to joining Software AG, he led a security research group at Network Associates, and was responsible for the C2 security evaluation of Novell NetWare. He has published over 20 papers in refereed research conferences including USENIX, IEEE, and ACSAC, as well as several articles in trade magazines.

In his spare time, Epstein works to improve the security of electronic voting systems as a consultant to several state governments, and serves on technical advisory boards for security startups.
